DATA CENTER REGULATORY COMPLIANCE SERVICES

ABOUT US

Corporate Environmental Services Inc. (CES) specializes in providing personal attention and high-quality environmental health and safety (EHS) consulting, due diligence and regulatory compliance services to private sector clients throughout the United States.

CES partners with organizations in the biotech, pharma, data center and allied services industries by providing policy / program development, training, and customized solutions to remove obstacles and navigate the unique and quickly changing regulatory and health risks encountered in these industries.

Over the past two decades, CES has developed specialized capabilities and services useful to the owners and operators of data centers, facilities management firms and their end users and equipment vendors.

VIRTUAL STAFFING

Many of our clients utilize CES as an ongoing adjunct to their in-house resources with a mix of on-site and remote EHS technical support.

Due to the complexities of EHS compliance, client downsizing, or other business considerations, CES has assisted by providing "virtual" staff at client sites.

In some situations, these needs were temporary. In others, clients have found that the ongoing utilization of CES resources provides the best balance between maintaining compliance and managing costs.

ABOUT CORPORATE ENVIRONMENTAL SERVICES INC.

KEY PERSONNEL

Frank S. Jankoski is the founder and President of CES. A Rutgers graduate with degrees in Chemical Engineering and Economics, Frank has been providing environmental consulting services to public and industrial clients for 30+ years. His expertise includes EHS compliance strategies, coordinating complex permitting efforts, facility operations, lab startups, commissioning, and decommissioning.

Dr. Sunil Hangal, Associate, has extensive experience in air permitting, compliance and analysis. Areas of expertise include air quality, greenhouse gas inventory assessment and management, risk management planning, source sampling and emissions control technology, pollution prevention, EH&S compliance management, environmental impact assessment/site investigation, wastewater, solid & hazardous waste management, environmental management systems, sustainability, and environmental health & safety compliance.

Shannon J. Busby, Senior Project Manager, has 25 years' experience as an EHS consultant and project manager. He has developed a wide variety of EHS programs to meet clients' goals and achieve compliance with state and federal regulations via a mix of hand-on and remote support. Shannon's recent focus has been building complex EHS management systems for CRDMOs and Life Science Organizations in PA and NJ.

Ms. Clare Helms, Environmental Engineer, has over 10 years' experience in compliance work, particularly with discharge prevention, cleanup and removal in relation to major facilities working with hazardous substances. More recently, Ms. Helms has assisted life science companies with EHS program development & augmentation.
